

KEIM STUCASOL®

SOL SILICATE RENDER - PERFECTION IN RENDER

KEIM STUCASOL – A SUCCESS STORY

SOL SILICATE RENDER – A PIONEERING INNOVATION

KEIM Stucasol, the world's first sol-silicate render, combines the physical properties of silicate building materials with the advantages of sol-silicate as binding agent. It is highly water repellent, open to diffusion and non-combustible. KEIM Stucasol enables simple and safe processing, homogeneous surfaces and universal application. With the innovative sol-silicate technology of KEIMFARBEN we offer you a ready-to-use render in a practical bucket that sets new standards in the market.

SUSTAINABLE FACADE PROTECTION

Our biocide-free sol-silicate render solution is characterised not only by its environmental compatibility, but also by its low soiling tendency. Dirt particles hardly adhere to the surface because silicate coatings are anti-static. This keeps the surface clean for longer and the reduced frequency of renovation is additionally resource-saving. Sustainability as a matter of course!

FASCINATION IN COLOUR

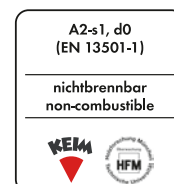

Our high level of customer satisfaction is based on the unequalled colour stability and long-term protection of KEIM Stucasol. The brilliant luminosity and fascinatingly vivid appearance of the intense colour shades provide the typical KEIM appearance on facades. And it gets even better: KEIM Stucasol does not need to be painted over! Even without a painted finish, you get a uniform appearance and perfect look.

The natural look of the textured characteristics of KEIM Stucasol

HIGHEST COLOUR SHADE QUALITY

The secret behind the highly colour intensive and stable render surfaces of KEIM Stucasol lies in the pigment preparation specially developed for KEIM silicate paints and renders. KEIM Pigment-Powder-Fluids (PPFs) consist of purely inorganic, lightfast pigments for sustainably beautiful colour designs. They are unmatched in colour stability and maintain the unique KEIM quality criteria for factory tints. Perfect covering power in every shade gives KEIM Stucasol incomparable colour depth and matt brilliance for beautiful, homogeneous surfaces and a natural look with textured render characteristics.

ARCHITECTURAL DIVERSITY – UNLIMITED POSSIBILITIES

STYLISH RENDER

Render surfaces are back in fashion. For a long time, render was considered old-fashioned and was mainly used in architecture for traditional buildings. For energy-saving renovations, especially in residential construction, render is once again becoming more important. Planners and craftsmen are focusing more and more on traditional render techniques, counteracting the monotony of smooth render on facades and redesigning render surfaces. The individual character of any building is emphasised by design options due to historic or modern render techniques in combination with colour, shape and texture.

The natural matt appearance and incomparable colour depth of KEIM Stucasol makes the render both unique and different at the same time.

FROM HISTORIC PRESERVATION TO NEW CONSTRUCTION

KEIM Stucasol can be used in an almost unlimited number of ways due to its wide range of applications. Outside on masonry, concrete, or thermal insulation systems, inside in stairwells, office buildings or modern residential construction, on historical buildings, the housing industry or private house construction. The biocide-free ready-to-use sol-silicate render impresses everywhere with its wide range of colour shades, its distinctive, naturally matt appearance and infinite design possibilities. The colour depth meets all your expectations. From soft to strong, everything is possible.

KEIM STUCASOL – PERFECTION MEETS EFFICIENCY

PARTICULARLY ECONOMICAL

KEIM Stucasol is the all-round, ready-to-use sol-silicate render straight from the bucket! It scores with its simple and rational processing. With its mineral surface, KEIM Stucasol provides a particularly uniform appearance and dries stain-free. Plus, a final paint coat is not required.

A GOOD TEAM

KEIM Stucasol-Fondo is available as a base coat for KEIM Stucasol. The levelling primer coat prevents the substrate from grinning through and aids render application.

KEIM STUCASOL – BENEFITS

- Ready-to-use sol-silicate render
- Simple and efficient processing
- For highest quality requirements and colour brilliance
- Biocide-free
- Mineral matt appearance
- Non-combustible
- Pure mineral lightfast pigments
- Uniform appearance, even without a finish coat
- Perfectly suitable as finishing render for exterior, interior and for KEIM external thermal insulation composite systems
- Can be tinted according to all common colour collections with KEIM PPF®-Technology
- Matching silicate primer: KEIM Stucasol-Fondo
- Suitable for application by trowel or by machine

**Spectacular surfaces and simple, rational application.
KEIM Stucasol – the render for a top efficient performance.**
